BENEFITS OF HAVING A FIREPLACE DOOR

Reduce Down Drafts- When the fireplace is cool and not in use, by closing the fireplace doors, you will substantially reduce the amount of down draft through the opening. The problem of down drafts is more pronounced in more tightly insulated newer homes when exhaust fans in the bathroom or kitchen are turned on.

Prevent Heat Loss-Save Energy As the fire is dying down, and before the fireplace is cooled off, for a period of time warm room air continues to flow up the flue to the outdoors. By closing the fireplace door at this time, you will substantially reduce the amount of heat loss to the outdoors.

Smoke Spillage- If for any reason you experience smoke spillage to the inside of the room, by closing the glass doors, you will substantially reduce the amount of smoke spillage.

Odor Containment- Cord wood burning fireplaces in particular may have a certain odor, which will be less pronounced if glass doors are in closed position.

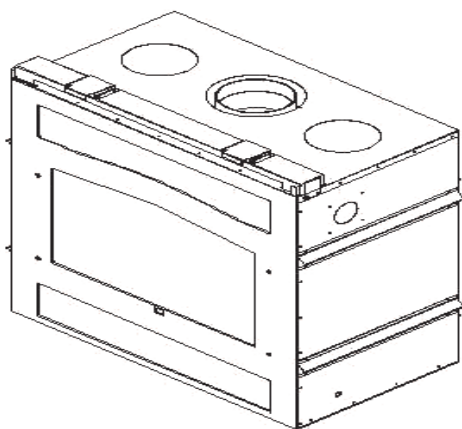

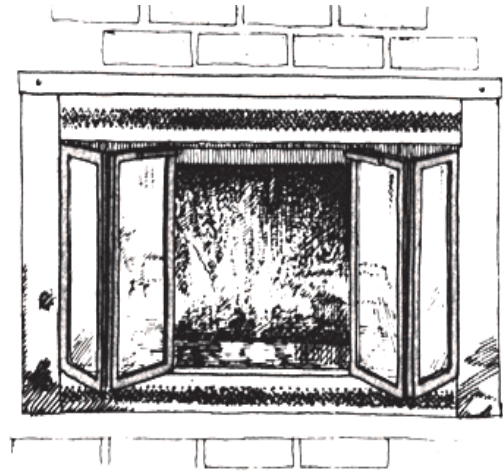

Aesthetics- The fireplace almost always occupies a prominent, or focal point in a room. The fireplace enclosure will give you the ability to give your fireplace a finished look and is a decorating tool.

Safety- By closing the fireplace door as the fire is dying down, you will have enhanced spark protection, and greatly reduces the chance of causing an unintended fire in case of possible re-ignition.

CHOOSING THE RIGHT DOOR

Hearth Craft makes fireplace doors for masonry as well as zero clearance fireplaces. The first step would be to verify what type of fireplace you have.

Masonry Fireplace: These are made of brick and mortar, and burn either cordwood or artificial log sets. These units take combustion air from the dwelling and vent products of combustion outside the dwelling, normally vented up through the roof of a structure. You can choose any of our masonry glass doors for this type of fireplace.

Prefabricated (zero-clearance) Fireplace:

This is a factory built fireplace that can be safely built into a wall or a corner. There are many different type of zero-clearance fireplaces. Our Rainbow zero-clearance doors can be used only on factory built fireplaces that burn either cordwood or artificial log sets, and use factory-built metal pipes that take in combustion air

from the dwelling and vent products of combustion outside the dwelling through the roof. Do not install Hearth Craft glass enclosures on vent-free fireboxes.

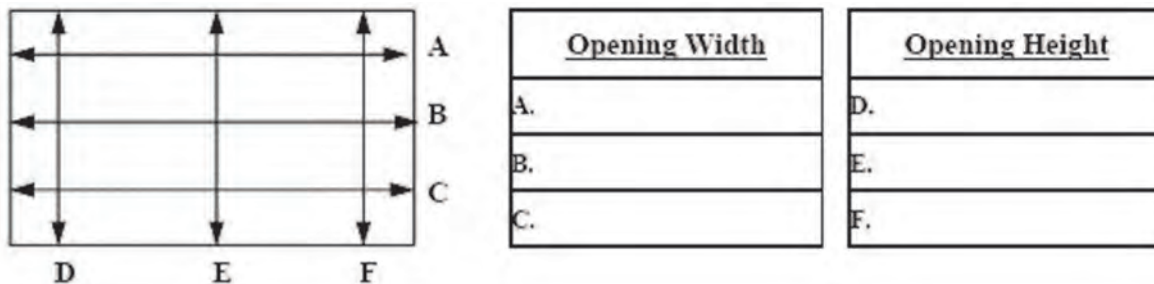

How to Measure for a Fireplace Door

Prior to ordering, door size must be determined. For all masonry doors, please use the guidelines below to determine door size, then use the door size to determine the stock number and pricing. For Rainbow Doors, please use the work sheets provided.

For the best fit, the fireplace opening should meet the following requirements:

- Mounting surface should be smooth and level.
- Suitable mounting surface on top and bottom of opening.
- Fireplace opening should be square & level.
- Any out of plumb conditions on the opening will be exaggerated or will prevent installation or proper operation of door.
- If measurements do not correspond to a stock size, a custom door will need to be ordered.

Measuring the Fireplace Opening (Example)

- You will need to measure the fireplace opening in three different places, both vertically and horizontally.
- Measure the inside of the fireplace opening to the nearest **1/16"**.
- Write down the measurements.
- Using the **smallest opening dimensions**, refer to sizing charts given on the Product Information pages to determine door size.
- If measurements do not correspond with opening sizes on the chart, we can make a custom door for you.

How to Order

STEP 1

REVIEW PRODUCT PAGES & SELECT A MODEL

STEP 2

USE THE SIZING CHARTS (EXAMPLE SHOWN BELOW)
TO DETERMINE DOOR SIZE

Door Size	Opening Width	Opening Height	Finished Dimensions of Door
3425	27 1/8 To 33"	20 5/8 To 24 1/2"	34 x 25"
3429	27 1/8 To 33"	24 5/8 To 28 1/2"	34 x 29"
4025	33 1/8 To 39"	20 5/8 To 24 1/2"	40 x 25"
4029	33 1/8 To 39"	24 5/8 To 28 1/2"	40 x 29"
4033	33 1/8 To 39"	28 5/8 To 32 1/2"	40 x 33"
4625	39 1/8 To 45"	20 5/8 To 24 1/2"	46 x 25"
4629	39 1/8 To 45"	24 5/8 To 28 1/2"	46 x 29"
4633	39 1/8 To 45"	28 5/8 To 32 1/2"	46 x 33"

STEP 3

USE THE DOOR SIZE DETERMINED ABOVE TO FIND THE
STOCK NUMBER, FINISH AND PRICE (EXAMPLE GIVEN BELOW)

Plated Polished Brass

Size	Stock No.	Sugg. Retail Price
3425	04710F	\$419.00
3429	04711F	\$419.00
4025	04712F	\$429.00

2” Riser Bars

Hearth Craft’s Riser Bars add 2” height to all **Sentry, Classic, Contemporary & Traditional Series doors.**

Custom lengths are also available for an Additional \$20.00 Set-Up Charge (no discounts). Please allow up to ten business days for custom sizes.

2” Riser Bars attached easily to the bottom of the doors. For Example, adding a riser bar to a door size of 4029 will then change the size to 4031.

Riser Bars are not intended for the Slimline, Ultraview, Mystique, Horizon or Rainbow Series.

How to Measure for a Custom Masonry

To order a custom fit door, finished dimensions must be determined prior to ordering. Please use the guide lines below to determine finished dimensions, then use the finished dimensions to determine the price of the door on the next page.

For the best fit, the fireplace opening should meet the following requirements:

- Suitable mounting surface on top and bottom of opening.
- Mounting surfaces must be level.
- Fireplace opening should be square & level. Doors are made square. Any out of square conditions on the opening will be exaggerated or will prevent installation.

Measuring the Fireplace Opening

Slimline & Serenity

- **INSIDE FIT:** To determine finished dimensions, we recommend using the smallest opening Dimensions and subtracting 1/8" from the overall width & 1/16" from the height.
- **OVERLAP FIT:** To determine finished dimensions, we recommend using the smallest opening dimensions and adding from 1" minimum to 3" maximum onto the overall width & from 1/2" minimum to 3" maximum onto the height.

Sentry Premiere, Contemporary, Traditional & Classic

- **INSIDE FIT:** To determine finished dimensions, we recommend using the smallest opening Dimensions and subtracting 1/8" from the overall width & 1/16" from the height.
- **OVERLAP FIT:** To determine finished dimensions, we recommend using the smallest opening dimensions and adding from 1" minimum to 6" maximum onto the overall width & from 1/2" minimum to 3" maximum onto the height.

Ultraview, Mystique & Horizon

- **INSIDE FIT:** To determine finished dimensions, we recommend using the smallest opening Dimensions and subtracting 1/8" from the overall width & 1/16" from the height.
- **OVERLAP FIT:** To determine finished dimensions, we recommend using the smallest opening dimensions and adding from 1" minimum to 2" maximum onto the overall width & from 1/2" minimum to 1-1/2" maximum onto the height.

Inside Fit **Overlap Fit**

By ordering a Custom Door, you have the option of mixing finishes as well as your choice of gray, bronze or clear glass. All Hearth Craft Masonry Series Doors are strictly masonry doors and are not intended for Zero Clearance (prefabricated) fireplaces. These doors are also not intended for fireplaces with vent free gas logs. Allow 10 to 15 business days for order.

Things to Remember...

- Any missing information from this form could result in delay with your order.
- If you do not receive an order acknowledgement within 24 business hours, please call Hearth Craft.
- Please allow up to ten business days from date of order entry for shipping.
- Hearth Express orders will ship within 7 business days of order entry.
- ♦♦Orders with beveled glass could take up to 21 business days to complete.

Rainbow

Zero Clearance Fireplace Glass Door

Features

- 5/8” thick by 1– 1/16" wide anodized aluminum frame to provide finish protection and heat resistance.
- The Zero Clearance design provides air gaps between each glass panel, to ensure proper airflow required by firebox manufacturers.
- Trimless "full-fold" doors with standard bronze tempered and edged glass open a full 180° for enhanced viewing, easy cleaning, and safety.
- Frames are profile 68 (slanted, square frame, subtle in appearance) to fit snug inside the box.
- While many stock sizes are available, doors may also be ordered as custom, inside fit as well as overlap fit.

Available finishes are:

Polished Brass, Antique Brass, Polished Chrome, Gloss Black, Flat Black and Satin Nickel . Mixed finishes may be ordered also (this makes it a custom).

Other custom options are:

Bronze (standard), clear & gray glass, bevel glass, tracked doors (inside fit only), cabinet style door set & fixed panel (for “L” shaped fireboxes).

Finish	Custom Stock #
Polished Brass	680013FS
Antique Brass	680055FS
Flat Black	680026FSF
Gloss Black	680026FS
Satin Nickel	680066FS
Chrome	680011FS
*Mixed Finishes	680000FS
<i>*E.g.- Flat Black Frame w/ Satin Nickel trim & handles</i>	

All standard Rainbow door model numbers are listed in the **cross reference table**. All standard stock doors are Profile 68 (slanted, square frame), inside fit, full-fold, and come standard with bronze glass. Box manufacturers sometimes make slight modifications without changing model numbers. Therefore, it is wise to double check the opening dimensions of the box against our cross reference table. Box Models not listed or opening dimensions not corresponding with model numbers in the table may be custom-made based on the opening measurements provided by the customer. Custom door pricing is based on the opening width and height of the fireplace opening. Choice of finish, mixing frame and trim colors, and glass tint (clear, bronze/tinted, grey/smoked) does not affect the price. Custom stock numbers (left) are based on finish only.

GLOSSARY OF TERMS

ANODIZED ALUMINUM - Aluminum is a lightweight, yet strong material that can be extruded into many attractive and functional profiles. After the metal is extruded, it is anodized (an electrochemical process that gives the extrusion its color and durability). The coating on the surface of the aluminum is very durable and will not tarnish, even in salt-air climates.

PLATED BRASS - Brass is an alloy of copper and zinc and the color is determined by the amount of copper used.

DAMPER - The mechanism that allows combustion air into the firebox.

EXTRUSION - Aluminum profile shaped with a die under pressure and heat.

HEAT RESISTANT CLEAR FINISH - To prevent tarnish, all of our solid brass and plated brass finishes have been coated with a clear enamel which is baked on at high temperatures, forming a glass-like surface.

LINTEL - Metal bar located at the top of a masonry fireplace which is used to support brick work above the firebox.

MESH CURTAIN - At Hearth Craft, we use 19 gauge tempered steel woven wire which has been darkened to provide a black finish. Black mesh curtain is easier to see through, which permits better visibility of a burning fire. Hearth Craft mesh provides excellent spark protection and allows some regulation of heat by opening and closing.

RISER BAR - A piece of brass 1 5/8" deep and 2" high which is attached to the bottom of glass door enclosures to compensate for raised hearths. These are available for Hearth Craft Sentry and Classic Doors.

TEMPERED GLASS - Tempering is a process in which glass is heated and then rapidly cooled which allows it to resist thermal stress and significant impact. At Hearth Craft we use only the highest quality glass. Each piece of glass is fully tempered to meet the standards of the American National Standards Institute and can generally withstand a minimum temperature of up to 500 degrees Fahrenheit for sustained periods of time. At Hearth Craft we use 3/16" glass rather than the industry standard 1/4" glass. The reason, because 3/16" glass dissipates heat faster and reduces the chance of hot and cold spots. Glass dimensions are calculated to the nearest 1/16th of an inch. The typical gap between the glass panels on a Hearth Craft enclosure is between 1/32nd and 1/16th of an inch. This "spacing" is necessary to allow for expansion of the glass when heated. Hearth Craft is so confident in our product that we warrant all our Masonry glass door enclosures for 5 years.

ZERO CLEARANCE - A factory built fireplace.

LET'S TALK THE SAME LANGUAGE

We want to help our customers recognize the actual parts with ease and convenience when ordering replacement parts.
